Database Schema & Data Mapping

Below is the exhaustive list of the complete database architecture in the TalentOps application, strictly mapping **the exact 69 tables and 6 views** found currently in the live Supabase instance.

Note: The ☑ in the Schema Verified column indicates confirmation against the project's source SQL schemas. ⚠ indicates elements found in the live Supabase instance but without explicit exact documented columns in the source code yet.

69 Active Tables (Comprehensive List)

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`announcements`	Organization-wide announcements.	`id`, `org_id`, `title`, `content`, `status`, `created_by`, `created_at`, `updated_at`	☑
`attachments`	Chat message attachments.	`id`, `message_id`, `file_name`, `file_type`, `file_size`, `storage_path`, `url`, `uploaded_at`	☑
`attendance`	Clock-in/out tracking.	`id`, `org_id`, `employee_id`, `date`, `clock_in`, `clock_out`, `current_task`, `created_at`	☑
`candidates`	Hiring and recruitment candidates.	*Undocumented in source SQL files*	⚠
`chat_history`	Records of chat logs.	*Undocumented in source SQL files*	⚠
`clients`	B2B clients or external agencies.	*Undocumented in source SQL files*	⚠
`company_details`	Information specific to the overarching company.	*Undocumented in source SQL files*	⚠
`conversation_indexes`	Optimizes chat inbox queries.	`conversation_id`, `last_message`, `last_message_at`, `updated_at`	☑

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`conversation_members`	Maps profiles to conversations.	`id`, `conversation_id`, `user_id`, `is_admin`, `joined_at`	☑
`conversations`	Chat containers (DMs, Teams).	`id`, `org_id`, `type`, `name`, `created_by`, `created_at`	☑
`departments`	Available departments within an org.	`id`, `org_id`, `department_name`	☑
`document_chunks`	Semantic text chunks used for AI search/RAG.	*Undocumented in source SQL files*	⚠
`documents`	Associated document records.	*Undocumented in source SQL files*	⚠
`employee_finance`	Constant financial variables.	`id`, `org_id`, `employee_id`, `basic_salary`, `hra`, `allowances`, `professional_tax`, `is_active`	☑
`employee_monthly_logs`	Aggregated logs for periods.	*Undocumented in source SQL files*	⚠
`employee_performance_snapshots`	Aggregations of an employee's performance.	*Undocumented in source SQL files*	⚠
`employee_reviews`	Formal staff 360 or manager reviews.	*Undocumented in source SQL files*	⚠
`employee_skills`	Individual map of skills an employee holds.	*Undocumented in source SQL files*	⚠
`employee_stage_history`	State audit log for employee lifecycle status.	*Undocumented in source SQL files*	⚠
`extension_requests`	Requests extending task or project deadlines.	*Undocumented in source SQL files*	⚠
`feedback`	General application or process feedback.	*Undocumented in source SQL files*	⚠

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`interviews`	Hiring interview scheduling.	*Undocumented in source SQL files*	⚠
`invoice_emails`	Transmitting invoice PDFs via email.	*Undocumented in source SQL files*	⚠
`invoice_items`	Line-items inside an invoice.	*Undocumented in source SQL files*	⚠
`invoice_templates`	Designs/presets for invoices.	*Undocumented in source SQL files*	⚠
`invoices`	Client billing documentation records.	*Undocumented in source SQL files*	⚠
`job_descriptions`	Specs mapped to individual jobs.	*Undocumented in source SQL files*	⚠
`jobs`	Active postings or roles to fulfill.	*Undocumented in source SQL files*	⚠
`leave_ai_analysis`	AI assessment of leave requests.	`id`, `leave_id`, `employee_id`, `org_id`, `analysis_data`, `risk_level`, `team_coverage_impact`...	☑
`leave_audit_logs`	State changes for a specific leave application.	*Undocumented in source SQL files*	⚠
`leaves`	Employee leave requests.	`id`, `org_id`, `employee_id`, `from_date`, `to_date`, `reason`, `status`, `risk_score`, `created_at`	☑
`message_reactions`	Emoji reactions to messages.	`message_id`, `user_id`, `emoji`	☑
`messages`	Individual chat messages.	`id`, `conversation_id`, `sender_user_id`, `content`, `message_type`, `reply_to_id`, `created_at`	☑
`notes`	Miscellaneous internal notes.	*Undocumented in source SQL files*	⚠
`notifications`	Realtime application alerts.	*Undocumented in source SQL files*	⚠

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`offers`	Hiring candidate offers.	*Undocumented in source SQL files*	⚠
`organization_memberships`	Members mapped to organizations.	*Undocumented in source SQL files*	⚠
`orgs`	Top-level tenant information (Supersedes `organizations`).	*Undocumented in source SQL files*	⚠
`payroll`	Periodically calculated payslips.	`id`, `org_id`, `employee_id`, `month`, `basic_salary`, `hra`, `deductions`...	☑
`payslips`	Document records for payrolls.	*Undocumented in source SQL files*	⚠
`policies`	Company HR documents policies.	*Undocumented in source SQL files*	⚠
`poll_votes`	Votes cast by users on polls.	`id`, `poll_option_id`, `user_id`	☑
`profiles`	App-specific user data.	`id`, `org_id`, `email`, `full_name`, `role`, `job_title`, `department`, `technical_scores`...	☑
`project_documents`	Docs related directly to projects.	*Undocumented in source SQL files*	⚠
`project_members`	Maps profiles to projects & roles.	`id`, `org_id`, `project_id`, `user_id`, `role`	☑
`project_time_logs`	Summarized logged hours for a project.	*Undocumented in source SQL files*	⚠
`projects`	High-level containers for tasks.	`id`, `org_id`, `name`, `status`	☑
`semantic_cache`	Caching layer for fast AI similarity lookups.	*Undocumented in source SQL files*	⚠
`skills_master`	Master dictionary of skills.	`id`, `name`, `description`, `category`	☑

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`task_audit`	State and change logs for tasks.	*Undocumented in source SQL files*	⚠
`task_evidence`	User uploaded assets to verify a completed task.	*Undocumented in source SQL files*	⚠
`task_feedback`	Direct comments regarding a task's progress.	*Undocumented in source SQL files*	⚠
`task_notes`	Simple ad-hoc descriptions for a task.	*Undocumented in source SQL files*	⚠
`task_reviews`	Formal assessments of a completed task.	*Undocumented in source SQL files*	⚠
`task_risk_snapshots`	Point in time snapshots capturing AI risk probabilities.	*Undocumented in source SQL files*	⚠
`task_skills`	Skills directly correlated to a given task.	*Undocumented in source SQL files*	⚠
`task_stage_history`	State audit for a task's progression through stages.	*Undocumented in source SQL files*	⚠
`task_stages`	Distinct workflow stages.	*Undocumented in source SQL files*	⚠
`task_state_history`	Event logs of task state alterations.	*Undocumented in source SQL files*	⚠
`task_steps`	Granular task checklists.	`id`, `org_id`, `task_id`, `stage_id`, `step_title`, `status`, `completed_at`...	☑
`task_submission_skills`	Skills verified directly out of a particular submission.	*Undocumented in source SQL files*	⚠

Table Name	Description	Exact Data Mapped (Columns)	Schema Verified
`task_submissions`	Completion data/points for tasks.	`id`, `task_id`, `student_id`, `actual_hours`, `final_points`, `bonus_points`, `penalty_points`	☑
`tasks`	Core unit of work assignments.	`id`, `project_id`, `title`, `description`, `assigned_to`, `status`, `allocated_hours`...	☑
`team_financials`	Aggregated budgets running across whole teams.	*Undocumented in source SQL files*	⚠
`team_members`	Join/map of profiles directly to teams.	*Undocumented in source SQL files*	⚠
`teams`	Groupings of profiles generally.	*Undocumented in source SQL files*	⚠
`tickets`	Support or service request submissions.	*Undocumented in source SQL files*	⚠
`time_logs`	Precise hour entries.	*Undocumented in source SQL files*	⚠
`timesheets`	Bundles of logs submitted periodically for review.	*Undocumented in source SQL files*	⚠

6 Live Database Views

(Views are virtual tables generated by a stored query, which is why they are counted separately from "Tables" in the dashboard header).

View Name	Description
`employee_rankings_view`	Computed rankings of employees based on their scores.
`project_work_summary`	Aggregates of a project's completion state.
`v_resource_gaps`	Query spotting lacking resources based on capacity mapping.
`v_team_analytics`	Output computations covering team productivity.

View Name	Description
`view_assignable_employees`	Exposing active logic who can grab an unassigned task.
`view_employee_aggregate_performance`	Combining skill growth & task points over time matrices.
