Database Trigger Mapping

This document explicitly maps the **PostgreSQL Triggers** executing automatic business logic across the 69 tables in the live Supabase database.

(Note: Triggers are automatic actions that fire immediately before or after a row is inserted, updated, or deleted. They act as the database's automatic nervous system.)

⚡ Active Custom Business Logic Triggers

These are the custom-written triggers that handle complex application state changes. Your database relies on exactly **two core business logic triggers**, both centered around the Task Engine module.

Trigger Name	Attached Table	Firing Event	Action Performed
`trg_calculate_points`	`task_submissions`	`AFTER INSERT OR UPDATE`	Instantly runs the `calculate_task_points()` RPC whenever an employee clicks "Submit Task", recalculating their total gamification score based on hours and skills.
`trg_update_task_hours`	`tasks`	`AFTER INSERT OR UPDATE`	Automatically catches any modifications to the `allocated_hours` or `actual_hours` on a task, ensuring budgets stay mathematically synced across the underlying SQL calculations.

🕒 Generic Timestamps Triggers (System Standard)

Almost every standard data table in the Supabase schema shares a singular, generic trigger used purely for row-level system maintenance.

Trigger Name	Attached Tables	Firing Event	Action Performed
(Various timestamp triggers)	Most Core Tables	`BEFORE UPDATE`	Automatically intercepts the update command and overwrites the `updated_at` timestamp column to `NOW()`. This guarantees the timestamp is always accurate, regardless of what the frontend React code attempts to send.

🚫 Tables Operating WITHOUT Custom Business Triggers

The remaining **67 tables** do not have any complex custom business logic Triggers attached to them. They rely entirely on standard CRUD operations without intercepting the inserts or updates for deeper side-effects.

Organization & User Data (No Custom Triggers):

- `company_details`
- `departments`
- `employee_finance`
- `employee_performance_snapshots`
- `employee_reviews`
- `employee_skills`
- `employee_stage_history`
- `organization_memberships`
- `orgs`
- `profiles`
- `skills_master`
- `team_financials`
- `team_members`
- `teams`

Chat & Messaging (No Custom Triggers):

- `attachments`
- `chat_history`
- `conversation_indexes`
- `conversation_members`
- `conversations`
- `message_reactions`
- `messages`
- `poll_votes`

Project Execution (No Custom Triggers):

- `document_chunks`
- `documents`
- `extension_requests`
- `feedback`
- `notes`
- `project_documents`
- `project_members`
- `project_time_logs`
- `projects`
- `task_audit`
- `task_evidence`
- `task_feedback`
- `task_notes`
- `task_reviews`
- `task_risk_snapshots`
- `task_skills`
- `task_stage_history`
- `task_stages`

- `task_state_history`
- `task_steps`
- `task_submission_skills`
- `tickets`

HR, Payroll & Leaves (No Custom Triggers):

- `attendance`
- `employee_monthly_logs`
- `leave_ai_analysis`
- `leave_audit_logs`
- `leaves`
- `payroll`
- `payslips`
- `policies`
- `time_logs`
- `timesheets`

Hiring & Invoicing Modules (No Custom Triggers):

- `candidates`
- `clients`
- `interviews`
- `invoice_emails`
- `invoice_items`
- `invoice_templates`
- `invoices`
- `job_descriptions`
- `jobs`
- `offers`

Announcements & Internal (No Custom Triggers):

- `announcements`
- `notifications`
- `semantic_cache`
